"CDI Data Management and Reporting Software for under $20k, seriously?"

Seriously.

Getting information and results out of your CDI Program data shouldn't be a complicated process. While enterprise level systems might work well for some hospitals, often the added "bells and whistles" merely confuse users and go unused. Instead, simplify with CDIP.web®! CDIP.web® was specifically designed by a CDI Specialist and Certified Coder to help hospitals capitalize on the benefits of a web-based software solution to strengthen the value of and grow their CDI Program, while being extremely cost effective at the same time.

Dramatic New Pricing Paradigm
Unlimited Users, Beds and Payers included with each site license! This is an unprecedented shift in pricing structure unmatched by anyone. With budgets being squeezed from every direction, this is a welcome cost savings for hospitals big or small.

No New Server Hardware or Software Required
CDIP.*web*® resource requirements are minimal and designed to save costs by leveraging your existing network and server infrastructure, including virtualization. This also has the added benefit, unlike hosted applications, of keeping your data secure within your own network environment.

No New Client Software Required
CDIP.*web*® is completely web-based, you can use any major operating system and it's default web browser*. No additional client software or hardware installation required. You can use a desktop, laptop, netbook, tablet PC or even a Thin Client.

Completely Customizable
Why restrict or try to make your CDI Program fit into a canned application using someone else's codes and descriptions? CDIP.*web*® allows you to create and use as many of your own unique codes and descriptions as you need for your CDI Program!

Support for MS and APR DRG Payers Included
CDIP.*web*® allows you to define multiple MS-DRG and APR-DRG Payers at No extra cost, including the ability to adjust their individual blended rates throughout the year.

Built-In Reporting in Every View
CDIP.*web*® has a number of included reports in both graphical views and grid format. Unique to CDIP.*web*® is each screen view's data can be searched, sorted and filtered to create your own customizable reports on the fly! No need to wait on IT or vendor to get the data you want!

**Quick and Advanced Searching Features**
Each screen view has both a Quick Search and an Advanced Search that allows you to data mine any piece of information stored in CDIP.*web*®. You can then sort, filter, print or export it for further analysis or data sharing.

Robust Data Exporting
Export any data stored within CDIP.*web*® for sharing with others or for further analysis in third party applications. There are several formats to choose from including Excel spreadsheet, CSV, XML and Word.

CDIP.web®

Easily Access, Track and Review your CDI Program Data.

With CDIP.*web*®, your Clinical Documentation Improvement Specialists can easily access, track, and review their CDI Program's data, as well as create reports to trend and measure its effectiveness. This ability to provide Physicians and Hospital Administration with the critical decision making data they need, will help to increase your CDI Program's value and growth.

CDIP.*web*® provides both graphical and grid view reporting formats, and the ability to export its results to Excel, Word, XML or CSV file formats for further analysis and data sharing.

Streamlined Query/Clarification Workflow.

With CDIP.*web*®, all queries/clarifications are attached to the appropriate encounter, and include the reason for the clarification, request and response date, physician response, and detailed notes.

You can indicate each query's outcome and if it should result in a CC or MCC to Coders, when allowing Coder access.
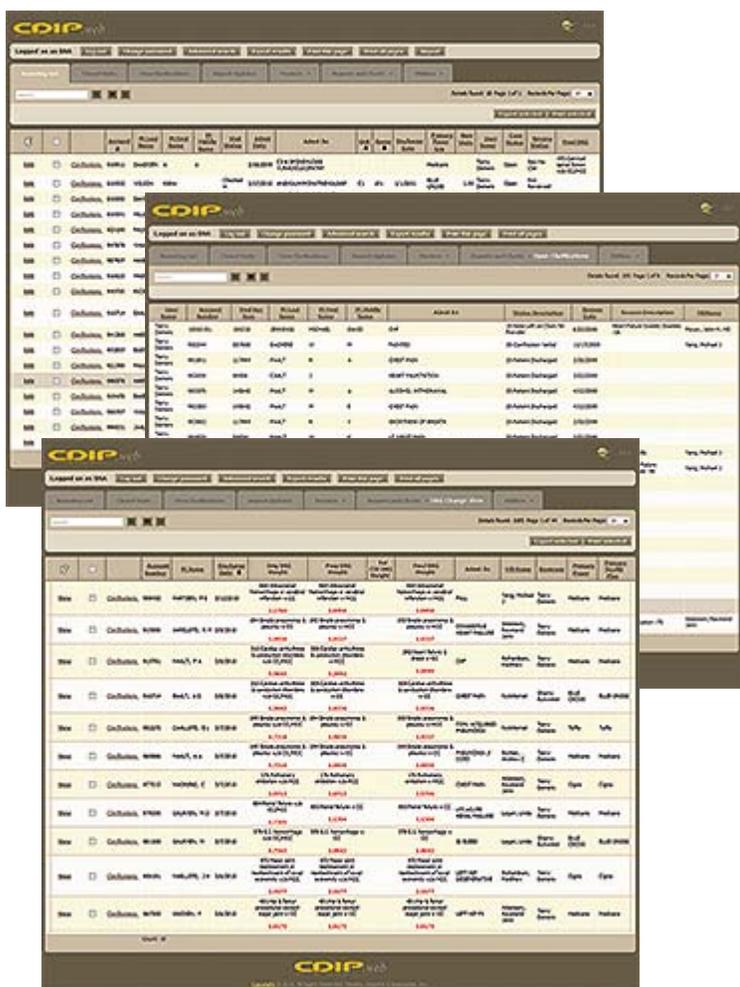

Built-In Flexibility Allows Easy Customization.

CDIP.*web*® Masters design allows you to define your own Physicians, Status, Reason and Response codes. User Master allows you to maintain individual User's access with built-in Security Groups. Optional Network Single Sign-on is also available.

Payer Rate Master allows you to define multiple Payers and their blended rate(s), if applicable. This data may be used to calculate reimbursement dollars for each encounter based on fiscal year weights of original, proposed and final DRGs.

New DRG's are quickly and easily imported into the DRG Master using the embedded Import feature.

Quick and Easy Daily Admissions Entry.

CDIP.*web*® Import Utility facilitates quick and easy population of daily admissions from your Patient management system, in either an exported Excel based spreadsheet or CSV formatted file, including Admit date and reason for admission, patient location, Attending MD and Payer data, etc.

Patient Update utility takes data exported from your Patient management systems in either an Excel based spreadsheet or CSV formatted file, and updates all existing encounter records with patient room, discharge date, payer/health plan and Final DRG data, etc.
